This listing of claims will replace all prior versions, and listings, of claims in the application:

## Listing of Claims

- 1. (Original) An apparatus for opening a closure mechanism of a resealable package, the closure mechanism comprising first and second closure profiles constructed and arranged to selectively engage, the apparatus comprising;
- (a) a piston and a rod, said rod being in operable connection with a wedge;
- (b) a guide channel aligned to guide the closure mechanism in proximity with the wedge; and
- (c) means for activating said piston such that the piston moves the rod which functions to insert the wedge into the closure mechanism to thereby open the closure mechanism.
- 2. (Original) The apparatus of claim 1 wherein upon activation of said piston the rod is moved in a reciprocal and repetitive manner.
- 3. (Original) The apparatus of claim 1 further comprising a support blade in planer alignment with said wedge such that the closure mechanism is supported by the blade and aligned in proximity with the wedge.
- 4. (Original) The apparatus of claim 1 wherein the wedge further comprises guide members to align the closure mechanism in proximity with the wedge.
- 5. (Original) The apparatus of claim 1 wherein the wedge has a length substantially equal to the width of the resealable package.
- 6. (Withdrawn) The apparatus of claim 3 wherein the wedge has a general shape similar to a section of a circle.
- 7. (Withdrawn) The apparatus of claim 6 wherein the wedge further comprises an arm in rotatable connection with a brace such that upon activation of said piston the rod functions to rotate the wedge between the closure profiles of the closure mechanism.

8. (Withdrawn) The apparatus of claim 3 wherein the wedge is generally cylindrical in shape.

FAX NO. 724 337 5959

- 9. (Withdrawn) The apparatus of claim 8 wherein the wedge has an end that is tapered to facilitate its insertion into the closure mechanism.
- 10. (Original) The apparatus of claim 1 wherein the wedge is a channel wedge.
- 11. (Original) An apparatus for opening a closure mechanism of a resealable package comprising:
- (a) a piston and a rod, said rod being in operable connection with a wedge;
- (b) a guide channel aligned to guide the closure mechanism into adjacent proximity with the wedge; and
- (c) means for activating the piston such that the piston moves the wedge in a perpendicular direction relative to the closure mechanism to thereby pinch-open the closure mechanism.
- 12. (Original) The apparatus of claim 11 further comprising scaling bars in parallel alignment with said wedge.
- 13. (Withdrawn) An apparatus for opening a closure mechanism of a resealable package, the closure mechanism comprising first and second closure profiles constructed and arranged to selectively engage, the apparatus comprising;
- (a) a wedge having an opening plow and at least two guide legs, said plow being centered along a path of travel defined between the guide legs; and
- (b) means for moving said wedge to insert the plow into the closure mechanism to thereby separate the closure profiles.
- 14. (Withdrawn) The apparatus of claim 13 whereby said means for moving said wedge operate in a rotational manner.
- 15. (Withdrawn) The apparatus of claim 13 whereby said means for moving said wedge operate in a reciprocal manner.
